## Abstract

We study commutative directoids with a greatest element, which can be equipped with antitone bijections in every principal filter. These can be axiomatized as algebras with two binary operations satisfying four identities. A minimal subvariety of this variety is described.

**Keywords:** directoid, section antitone bijection, implication algebra, double implication algebra.

2000 Mathematics Subject Classification: 06A12, 03G10, 03G25.
